How can I add different page groups to my Real User Monitoring dashboard?

Add your page groups:

In order to tell Jetscale the Page Group you need to render this little script on each page. You can put either in the `<head>` or `<body>` section of your site. Make sure you do this after implementing the Real User Monitoring Snippet.

```
<script>JETSCALE.pageGroup = 'My Page Group'</script>
```

Simply replace `'My Page Group'` with the actual String that you want us to track.

Note: There might be also other use cases for Page Groups. I you want to find out what makes sense for your project feel free to contact us using the LIVE chat that's in your dashboard or
email us at: support@jetscale.com
