What is a page group?

In almost every website there are different kinds of pages. You could for example tag some pages as:

- Homepage

- Category Page

- Product Page

- Static Page (Imprint, Terms)

By grouping your pages in such a way you'll be able to see the aggregated data for those specific Page groups inside your Real User Monitoring dashboard, so you'll be able to able to track page speed, bounce rate, conversions, and so on, on different sets of pages.

Note: There might be also other use cases for Page Groups. I you want to find out what makes sense for your project feel free to contact us using the LIVE chat that's in your dashboard
or email us at: support@jetscale.com
